**The Vice President
of Nationwide Equipment**

In a world of continually rising prices for construction equipment and declining resale values, owning numerous pieces of equipment for various job applications is impractical and can be a heavy financial burden for your company.

The high cost of maintenance and repair can take a bite out of even the most lucrative projects. In addition, the ups and downs of an uncertain construction market can make contracting an unprofitable venture if working capital is tied up in equipment that is not continually employed.

For this reason, many contractors now prefer renting heavy equipment instead of owning it. The smart solution to growing your business is to maximize available credit and retain working capital for growth and expansion.

Our goal is to be part of the solution in helping your business succeed. To become your one-stop rental provider, we know that:

- *Customer loyalty is not automatic - it must be continually earned*
- *Good service is not enough - it must be the best*
- *Good quality is not enough - it must be superior*
- *Even low prices are not enough - they must be competitive*

We pledge to make it our business to understand the challenges presented by each of your projects.

Let Nationwide Equipment Rental help you solve your problems.

We can:

- *Absorb the costs of owning*
- *Assist you in meeting your deadlines*
- *Provide expertise and knowledge of the construction industry and what specific equipment will utilize maximum production*
- *Regularly Service all rental equipment on the job site*
- *Prove how superior our service really is*

**We're committed because...
When you succeed, we succeed!**
